

PAYMENTS

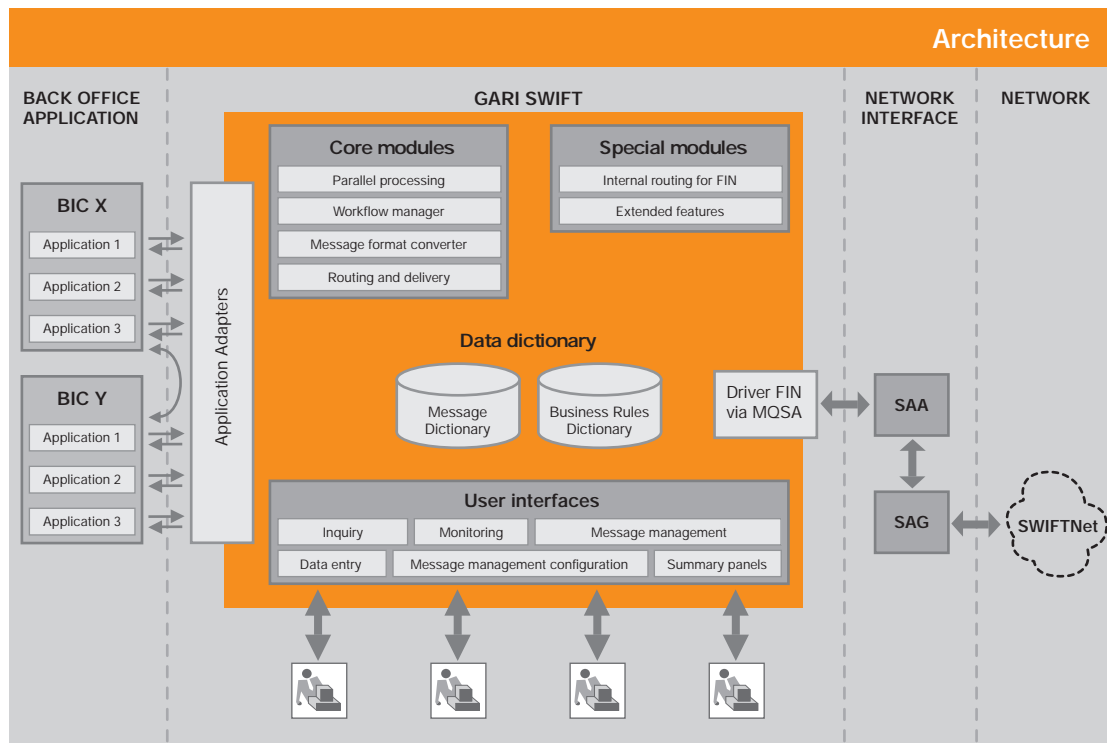

Payments flow management

the SWIFT network, rather than sending it and receiving from SWIFTNet. This reduces the network traffic for all those messages that are exchanged within the group.

- **Extended features** – to address specific requirements of business applications. Among the functions offered:
 - **Placing** – it allows to place the incoming messages of each branch, offering users the option to accept or refuse the message. Routing rules may be defined within the application or

recalled from external modules.

- **On line print** – may be carried out as hard copy, through an appropriate print key, or by writing the messages on logical print queues that are associated to a printer system.
- **Batch print** – customisable with specific layout and additional print details
- **Network Driver** – for FIN via SAA (SWIFTAlliance Access) based on the SWIFT MQSA protocol

TECHNICAL CHARACTERISTICS

- MVS operating system
- COBOL2 / COBOL MVS languages
- CICS/IMS TP MONITOR
- IBM DB2 Database
