One Messaging Gateway for All the Financial Networks

How TAS Network Gateway improves banking transactions efficiency:

- All payments types: ISO-15022, ISO-20022 SEPA SCT/SDD, T2, T2S, custom formats, etc.
- Isolated system interfaces improve productivity and quality of upgrades and replacements necessary for compliance with new regulatory changes and emergent standards: e.g. Ripple
- Delivers back-end applications full independence from NSPs
- Automatic message transformation and reconciliation
- Bundling of messages in files / Splitting of files into messages
- Centralized monitoring

The Largest Payments Carrier in Europe

Used in the European Single Shared TARGET 2 Platform and reconfirmed for T2-Securities launch.

Real-Time Information for Every Payment Transaction

Increases STP in payments with the security and resilience essential for critical payment processing through automated workflows.

Manage millions of transactions per hour

Efficient, stable and reliable Swift Certified performance; Also used to support TAS Service Bureau's added value services.

Network Gateway Objectives

Position

- SWIFT Certified **access gateway** to multiple financial networks
- **Format adapters** between legacy financial messaging to current and future network standards
- **Assist the migration** of DCPs, ICPs and mixed participants such as DCP cash / ICP securities

Vision

- Network Gateway **lets businesses focus on business** by remaining independent from Network Service Providers and data exchange protocols
- Help customers to **improve operational and cost efficiency**, maintain regulatory compliance and reduce risks
- **Reduce impact and disruptions** of enhanced business workflows through controlled roll-outs using phased approaches

Action Lines

- Working on T2S specifications for the major European CSDs
- Continuous development for present and future networks: Local networks, SWIFTNet, EBICS, Ripple

Banks

Financial Institutions

Service Bureaus

Corporations
