TAS in the ERP world: the value of experience

- Over **20 years of experience** in ERP implementation
- TAS solutions are built with **state of the art technology**
- Strategic Partnership with **Oracle**
- Consolidated relationship with market **technology leaders**, main **system integrators** and **consulting firms**
- Broad **customer base** spanning different industry sectors

Keep the «rhythm» of business changes

- Today's rapid and frequent changes in business processes represent a strong constraint for each company operating in the Services sector.
- The ability to react to changes in a prompt and effective way becomes one of the market-enabling factors, superseded only by the ability to anticipate and influence those changes.
- At the same time, ever growing complexity requires business processes to be approached and managed through structured Information Systems.
- Systems must be able to adapt themselves to significantly evolving roadmaps, allowing the customer to maximize on past investment and avoid unexpected roadblocks, such as complete substitution of the current ERP.

TAS extendERP: Innovation matters (1/2)

- The new ERP offering leverages on TAS Group's past experience and integrates new key values of the business proposition.
- Arising from a consolidated strategic partnership with Oracle, TAS extendERP is:
 - Implemented on a unique web-native technological platform and on a service driven architecture
 - Based on market standards such as Java J2EE web
 - Easily integrable with existing ERP systems thanks to its "SOA" logic, making it pluggable by steps and per component into a customer's existing legacy environment
 - Cloud oriented

TAS extendERP: Innovation matters (2/2)

- An integrated mix of International software components, Oracle Cloud (Fusion) Apps, and TAS proprietary software components offers “best of breed” in any business domain

- Functionally complete in all ERP application segments
- Extended through components that provide **verticalization** and **localization**
- **Customer eXperience, Social collaboration**
- Powerful integrated **workflow** and **document management** component
- Oriented to decision-making-processes and predictive actions via an embedded **Business Intelligence** engine available in all application modules

TAS extendERP components: Focus on the Business

In addition to full and deeply functional coverage of the most traditional administrative and accounting areas, the new solution is characterized by a specific focus on business oriented components.

TAS extendERP: Focus on «extended» cloud (1/2)

The «as a service» model gives access to the “best of breed” in a pay per use spending model, thus minimizing capital expenditures.

Our clients ask for complex solutions meant to optimize the management of both core and support processes, such as the administrative-accounting processes.

TAS Group responded with a new concept in cloud solutions: scalable; able to always adapt to different articulated requirements; covering hardware and application as a service; plus implementation services, support, BPO and professional consultancy “on the business.”

TAS extendERP: Focus on «extended» cloud (2/2)

- “Bundled” services
- Localization Components
- Financials Prepackaged
- Applicative Extensions

TAS extendERP is based on applicative and technological Oracle Cloud (Fusion) components.

TAS Group extends the solution value with added value components linked to:

- **Professional Services**, based on TAS deep knowledge of the business processes of the target market segment and the application platform
- **Vertical** Components and **applicative extensions** covering specific core business or **regulatory domains**.
- Implementation offered at fixed costs with certified compliance through TAS **Financials PrePacked**
- **BPO**, post go-live support à la carte
