 Cloud Solutions on Demand

.....  
**Get the jump on business changes**

The rapid and continuous changes of business processes are a strong constraint for all value-added services companies.

Knowing how to respond to changes in a timely and effective manner becomes the main factor to be competitive in the market, surpassed only by the ability to anticipate and guide these changes.

At the same time, increasing complexity makes it essential to provide structured information systems for the management of business processes.

IT systems must be designed to adapt to fast changes through a controlled but significant evolution that maximizes existing investments, avoiding unforeseen challenges resulting from complete replacement projects, while ensuring the highest levels of efficiency.

**ERP AS A DRIVER OF GROWTH**

The challenge is to transform ERP management systems into key enablers of business: not just back office tools but real drivers of growth.

Breaking with traditional paradigms requires ERP systems to be:

- best of breed in each of the covered functional domains
- flexible and easily evolvable also by the end-users themselves
- tailor-made, even if based on standard components
- open but integrable with what is already in-house, following an on-demand logic
- also available in the cloud.

**IN THIS DOCUMENT**

- 
- **Get the jump on business changes**
- 
- **The answer: TAS extendERP**
- 
- **TAS extendERP components: Focus on Business**

ERP systems must be able to:

- follow the companies in their expansion to international markets
- focus on business processes, with predictive analysis tools
- be implemented by business-domain experienced partners, able to manage projects with the maximum safety.

---

## The answer: TAS extendERP

### **TAS AND THE ERP WORLD, THE VALUE OF EXPERIENCE:**

- more than 30 years of experience in ERP implementation
- application solutions implemented in-house using state of the art technology
- TAS solutions used by a huge customer portfolio both in Italy and in Europe
- solutions and skills strongly focused on value-added services business
- strong relationships with market technology leaders, systems integrators and consulting firms.

These are the main values underlying TAS proposition for the ERP market.

### **THE VALUE OF INNOVATION**

The current market challenges led TAS to undertake a strategic project for the development of a new ERP solution capable to leverage on the past experiences and integrating the new key values of the business proposition.

Born within a new chapter of the consolidated partnership with Oracle, TAS extendERP is:

- implemented on J2EE web-native technology platform with a SOA architecture
- based on market technological standards
- easily integrable with existing ERP systems, thanks to its “by service” logic
- available in the cloud as pay per use
- consisting of a structurally integrated mix of international software components, Oracle Cloud Apps, and TAS software components, in order to offer the best of breed in each application domain
- functionally complete to cover all ERP areas, such as administration, accounting, production and management
- verticalised for service companies and financial entities, areas of historical presence for TAS
- integrated with a powerful component of workflow and document management
- oriented to decision-making processes and predictive actions, thanks to an embedded business intelligence platform available to all application modules.

TAS extendERP components:  
Focus on Business

TAS extendERP meets the growing needs of change management in tune with new technology trends and with the needs of the market operators, with particular focus on aspects such as cost reduction, ease of use, ease of integration with existing procedures and the growing demand for interactivity. In addition to a full and deep functional coverage of the most traditional administrative and accounting areas, the new solution is characterised by a specific focus on business oriented components.

TAS Group provides services and technological applications for cards, payment systems and financial markets. We operate globally, delivering innovative solutions to empower our customers' business.
