

PAYGLOBE @Il Salone dei Pagamenti 2017

PAYGLOBE is the solution to efficiently manage global payments end to end, from physical, mobile and virtual POS terminals, to the integration of loyalty and CRM, through a multi-acquiring system. A simple and secure architecture which offers all the innovation needed for the "payvolution".

Milan, November 22nd, 2017 - PayGlobe, a company specializing in innovative, flexible and customized payment management services, is sponsor at Il Salone dei Pagamenti 2017, the 3 days key event of the Italian Payment Industry opening today at the Milan MiCo.

PayGlobe is a spinoff of *Content Interface*, funded by *Owl*, the holding controlling *TAS Group*, following their strategic design to extend the offering portfolio with a full-line (physical, mobile, and virtual POS) granting merchants and banks the most modern, secure and simple payment management solution.

Through the collaboration with *Paytipper* – an Italian Payment Institution - already customer and, at the same time, partner of *TAS Group* for the card payment acceptance infrastructure, PayGlobe can offer its customers a comprehensive integrated supply chain with all necessary service components, starting from the selection of the POS terminal, through integration with cashier systems and interconnection with one or more national and international acquirers, for a wider and more convenient choice.

PayGlobe, therefore, could not miss the opportunity to present itself at Il Salone dei Pagamenti 2017, an event whose goal is entirely in line with the company's mission, namely the push to drive the "payvolution", focusing on integrating digital technologies, trade and marketing, between banks, entrepreneurs, Fintechs, Public Administration and professionals who believe in the strength of innovation.

The PayGlobe offer will be showcased to visitors at *Tas Group* booth L04. *TAS cashless 3.0™* platform is the technological enabler at the basis of PayGlobe's propositions, providing merchants with all the innovation they need, in addition to compliancy with the highest security standards required by the market in accordance with P2PE - PCI Security Standard.
